## Modern, but not a modest fire

Modern home heating. This unit is designed to take the chill out of any modern interior. The large convection compartment enhances the heating capacity while the elevated fire chamber ensures the perfect flame picture and creates the perfect wood storage space. Although it has a slim design, it has a generous heat output of up to 14kW. Stainless steel precision controls ensure optimum efficiency through secondary combustion whilst the air-wash system keeps the glass soot free for an unobstructed flame picture.
