

## Dali Built In

The Dali Built-in is tailored for those in search of the ideal combination of flexibility, top-notch craftsmanship, and advanced heating technology. Despite its simple design, this unit encompasses all the signature features of the Bogen range, delivering an impressive heat output of up to 8kW. Elevate your space with the Dali Built-in, where elegance and functionality converge seamlessly.

The Dali built-in unit features two separate controllable levers, each providing air to the combustion chamber. Engraved markings on the levers distinguish between primary and secondary airflow. Primary air fuels the fire through the ashpan, while secondary air is heated over the fire. This heated air serves as the unit's air-wash system, ensuring the glass remains clear. Additionally, the unit facilitates convection airflow, with the chamber between the firebox and exterior panel heating up. This generates a natural draft of warm air, emanating from the top of the unit for enhanced circulation.
